

Conventional Milking Parlours

Parallel, Herringbone and Rotary Parlours

Smart milking solutions

Fullwood JOZ: a fresher approach

Improve cow health and achieve your ambitions with smart milking that is right for your farm.

Conventional Milking

From the latest rapid exit or rotary system, to the more traditional Herringbone, Fullwood JOZ's conventional milking systems are renowned all over the world for their cow-first design and robust manufacture.

Robotic Milking

Fullwood JOZ's robots are built around cow comfort, adapting proven milking technology to deliver the ultimate in safe and efficient robotic milking for ambitious dairy farms. This has resulted in Fullwood JOZ's M²erlin – the 100% automated milking solution for higher yields and efficiency.

Cow Handling

Our range of labour-saving Cow Handling systems can suit every specific farm environment, whatever your arrangement. Whether you want to gently guide groups of cows towards your parlour or accurately separate your cows, this solution will let you calmly and intuitively direct cow flow as needed.

Streampulse

Streampulse is what makes Fullwood JOZ milking so unique and powerful. Streampulse creates a longer milking column (in the long milk tube) than traditional milking techniques for a reduced vacuum in the teat cups during the rest period. The sphincter is therefore able to relax while keeping milk drainage open for optimised milking speeds.

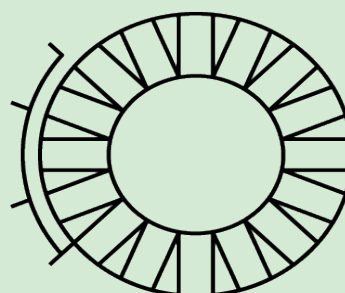

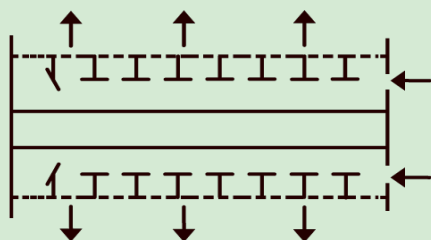

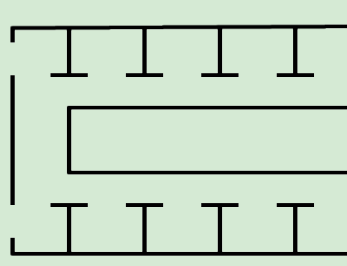

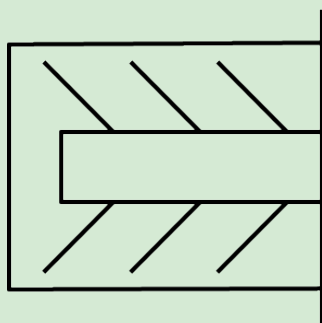

Herd Management

Fullwood JOZ's bespoke software options make improved herd management and smarter business decisions just one click away. Fullwood JOZ offers a smarter approach to dairy farming, suited to your unique set-up and ambitions.

FullSense

Available for all new and current M²erlin robots, FullSense analyses your herd to offer useful insights that support superior cow health and performance.

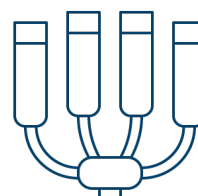

Milking that fits your farm

What would your perfect milking environment be? Choose a solution that meets your unique requirements, courtesy of Fullwood JOZ's extensive range of milking parlours. Whatever the size of your farm and your preferred milking system, we have a solution for you.

The right milking parlour should fit your farm, not the other way around. Fullwood JOZ's broad range of milking parlours can fit all types of dairy farm. Whether your operation is large or small, our solutions will help you achieve more from your milking.

Our Conventional milking parlours include:

- ☒ Herringbone Series Parlours
- ☒ Quick Series Parlours
- ☒ Rotary Series Parlours

Want to automate your parlour or set up a Rotary? Additional milking equipment is also available. Get in touch for specific Rotary and Milking Equipment brochures.

Equip your Herringbone or Parallel parlour with our SmartLine solution to get the most from your milking. SmartLine includes our HighLine Double-up, SwingOver and LowLine, all installed to your farm preferences.

All of FullwoodJOZ's milking systems put cow comfort first, promoting better milking and farmer ease of use combined with a robust and accessible

Herringbone Series

Our Herringbone Series parlours are used all over the world for their efficient, stress-free milking. With greater accessibility and durable design, the Herringbone series brings faster milking with a choice of standing angle to suit your farm.

The Herringbone combines efficiency with speed and safety, creating an accessible milking environment to fit every farm. Designed to put cow comfort first, the Herringbone Series supports productive milking for both cows and their farmers.

- ✓ Faster milking, entry and exit for cows
- ✓ Choice of standing angle to fit your farm set-up
- ✓ Easy access and movement for stress-free milking

The Herringbone Series can be fully equipped for your farm. Additional options are available to make your milking environment comfortable and efficient.

- ✓ Feeding
- ✓ Splash shield
- ✓ Manual or compressed air entry and exit gates
- ✓ Adjustable pit floor
- ✓ Adaptable breast rail
- ✓ Rump rail height 1.5 metre for a clean working environment
- ✓ Available as 25° and 50° milking angles
Cabinets above and/or below

Benefits include:

- ✓ Straight rump rail for smooth entry and exit
- ✓ Comfortable milking for cows and their farmers
- ✓ Superior udder presentation for quick cluster attachment

Quick Series

Our Quick Series Parallel milking parlours increase cow comfort, while improving milk yields and speed. Milking from behind allows better access and safety, while cutting walking distances.

The Quick Series offers a smooth and efficient milking routine, with positioning gates specifically designed to allow faster entry, greater precision and quick changeover of cows.

Quick-E | Quick-RE

Fullwood JOZ's Quick-E and Quick-RE is the ideal environment for milking cows from behind. Groups of cows can be swapped out quickly with or without a front exit, thanks to the hydraulic parallel upwards sliding breast rail. The only system of its kind, the hydraulic parallel delivers a significant increase in durability, costing you less in maintenance while extending its working life. Installation options include a lateral quick-change or a quick-change with a front exit.

The self-supporting construction not only reduces the number of obstacles on the platform, but the Adaptable Shoulder Rail Index (ASRI) lets the parlour adapt to fit any cow. Faster and more flexible, the Quick-E and Quick-RE make smart milking simple.

- ✓ Better positioning for cows, no matter the size or breed
- ✓ Robust construction for a long lifespan and low maintenance
- ✓ Lateral and Rapid-Exit options available

The ASRI

The Quick-E and Quick-RE feature the unique ASRI positioning system, allowing you to adapt the parlour dimensions to fit all cows, regardless of size.

ASRI benefits include:

- ✓ Improve results and guarantee complete milking every time. Cows are positioned by the shoulder instead of by the nose, for optimum attachment and cluster position
- ✓ Adapt parlour dimensions to fit cows of any size. ASRI is flexible to support any future changes you make to your herd, all whilst ensuring comfortable milking
- ✓ Let your cows exit comfortably and easily.
- ✓ Vertical lifting ASRI rail with shoulder indexing allows your cows to walk out without moving their head for more natural and peaceful milking

The overall result is a productive and durable parlour with effortless cow flow and comfortable milking.

Quick-E

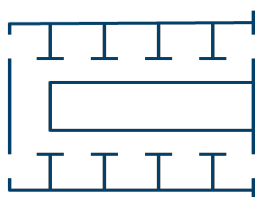

Side entry and side exit

The Quick-E combines fast throughput with complete flexibility, reducing milking time without compromising comfort. Designed to make milking smooth and relaxing for cows and their farmers, the Quick-E utilises the reliable ASRI rail positioning system, adaptable to your milking requirements.

- ✓ ASRI rail that adapts to fit every cow, no matter the size or breed
- ✓ Improved udder reachability
- ✓ Smooth cow flow
- ✓ Hingeable feeding troughs that close automatically for quick exit

Benefits include:

- ✓ High throughput reduces overall milking time
- ✓ Comfortable cow positioning due to adaptable gates and shoulder indexing
- ✓ Fast and easy changing
- ✓ 90° milking angle for better cluster attachment
- ✓ Hydraulic lifting breast rails allowing faster cow exit

Quick-RE

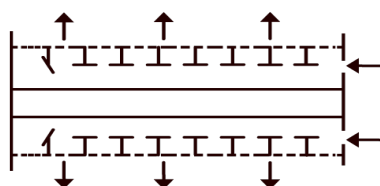

Side entry and front exit

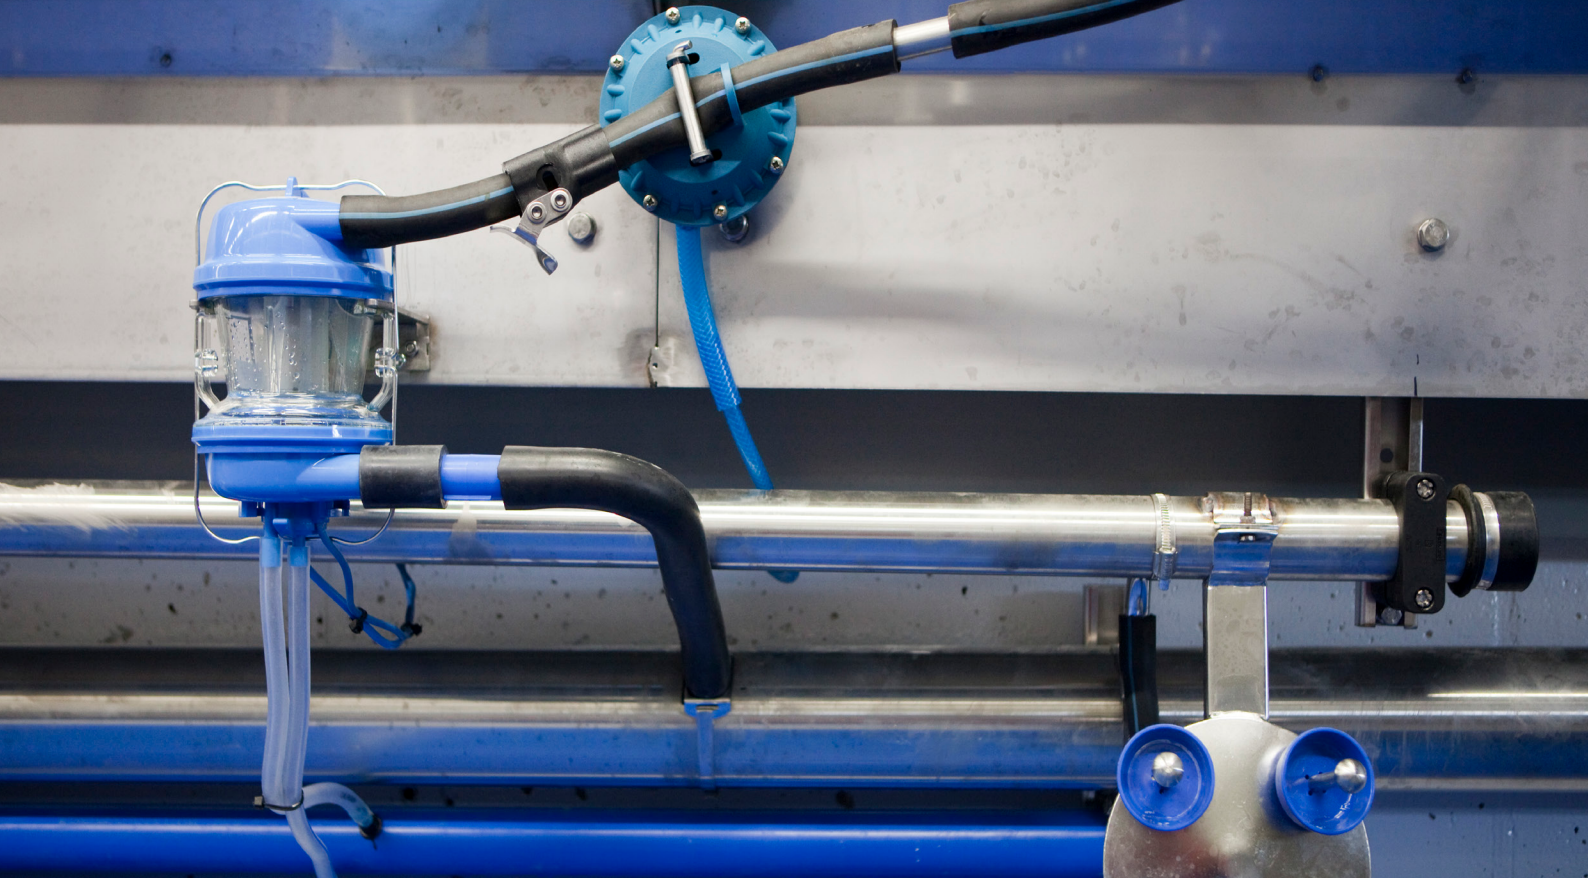

Maximise speed without compromising cow comfort. The Quick-RE builds on the Quick-E design to speed up cow throughput for farms that require even smoother and faster milking. The hydraulic lifting breast rail reduces overall milking times by allowing rapid cow exit, in a way that is natural and comfortable for your herd.

- ✓ Faster exit of cows due to rapid exit
- ✓ Vertical lift parlours for quicker release of the cows
- ✓ Feed mangers lifting up with ASRI rail
- ✓ Free standing structure

Benefits include:

- ✓ The adaptable shoulder index lets the parlour breast plate (including feed troughs) lift completely for faster throughput
- ✓ ASRI optimises cow positioning for exceptional cluster attachment every time
- ✓ Shorter walking distances for the farmer
- ✓ The sloping standing area positions cows closer to the back of the milking stall
- ✓ When milking is complete, the breast rail moves vertically allowing for quick exit of cows through the front

SmartLine

SmartLine is our installation technique that keeps the entire cluster to milk line area free of restrictions and sharp bends.

Options are available to suit every farm including:

- ✓ HighLine Double-up
- ✓ SwingOver
- ✓ LowLine

SmartLine supports higher flow speeds and improved cluster-on time for your Herringbone or Parallel parlour, allowing you to collect more milk in less time.

Benefits include:

- ✓ Complete and healthy milking every time
 - ✓ Improved milking efficiency thanks to higher speeds during the crucial first two minutes of milking
 - ✓ Automatic start to the milking process
 - ✓ Avoid restrictions or sharp bends in the milk tube
 - ✓ Extended lifetime of the parlour's flexible pipelines
- Optional milk dump line

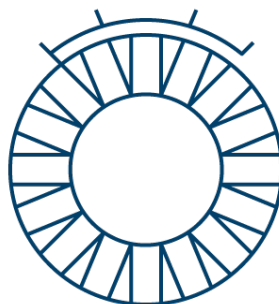

Rotary

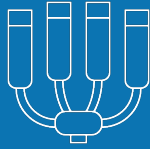

Our unique Rotary parlours put cow and farmer comfort first for faster, stress-free milking that increases profitability. Backed by decades of expertise and innovation, choose from a selection of different sizes and types to best suit your unique circumstances and needs. Offering robustness, safety, comfort and productivity, our Rotary parlours are the perfect environment to improve milking for you and your cows.

For more information about our Rotary parlours, get in touch to learn more and request your brochure.

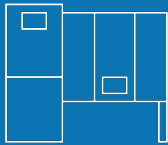

Benefits include:

- ✓ Smart milking allows you to fully empty the udder for faster collection and superior cow health
- ✓ Find a solution to suit your farm with a choice of options and robust support from our team
- ✓ Design that combines innovation and durability, letting your farm achieve more over a longer lifespan

Conventional Milking – From the latest rapid exit or rotary system, to the more traditional Herringbone, Fullwood JOZ's conventional milking systems are renowned all over the world for their cow-first design and robust manufacture.

Robotic Milking – By building our robots around cow comfort, Fullwood JOZ have delivered safe and efficient robotic milking for ambitious dairy farms. This has resulted in Fullwood Packo's M²erlin the 100% automated milking solution for optimum productivity.

Herd Management – Fullwood JOZ's bespoke software options make improved herd management and smarter business decisions just one click away.
